

# CHATGPT

The Revolutionary Chatbot 

---

## What is ChatGPT

- OpenAI created ChatGPT, a ChatBot.
- It is built on the GPT-3 model, which is a language-processing AI model.
- It's essentially a trained chatbot based on massive quantities of data.

# What is ChatGPT3

- GPT is an abbreviation for Generative Pretrained Transformer.
- OpenAI created a Language Processing AI Model.

- It can generate human-like text and has a wide range of applications, including language translation and text generation for chatbots.

## What does ChatGPT do?

- The objective is to answer queries posed by the user and to do so using the massive volumes of data on which it has been trained.
- It only responds in Chat.
- It does not give up-to-date information. It is only dependent on the massive volume of data.
- However, gathering massive volumes of data is no longer a difficult
- undertaking because many businesses already have massive amounts of data.

## Epilogue:

ChatGPT is a simple chat programme that allows you to type in questions and receive replies depending on them.

Conversing with an intellectual person is the best explanation for ChatGPT
